

Rooftop Garden

It is a practice of cultivating herbs and shrubs of our choice on the rooftop of buildings where there is no place for cultivation of these plants. Now a days it is gaining more importance as there is escalating population and huge concrete masses in urban areas. Keeping these points in mind, a rooftop garden has been established at KVK, Thiruvapur in the terrace of farmers' hostel in an area of two cents. Annual vegetables, spices, greens and medicinal plants are maintained in the terrace garden. It is maintained as a demo unit for farmers' visit. Having this type of garden in roof top serves a place to enjoy the fresh air, harvesting fresh fruits and vegetables and reduce temperature of roof top by providing shade.
